Responsible when learning and doing new projects.

Basic knowledges of algorithms and data structures.

Never give up on a problem until find the response.

Allways keep learning.

---

**ABOUT ME**

I'm from Perú, two years ago I find my passion for programming, when it happened I put all my effort in learning my first programming language, it was C++, I learned it because I wanted to be a game developer, but then i discovered web programming and that was easier, so I decided to be a full-stack web developer.

Back in the day, I was studying Engineering on a university, I noticed that it was not what I wanted so i deserted from my career and I only focus in learning web programming. Now i continue learning more and more, i like what i do and i do the better i can.
